

FTZ MOUNT ADAPTER

ONE MOUNT.
ENDLESS INSPIRATION.

Keep on using F-mount lenses even as you fall in love with your new NIKKOR Z lenses.

The FTZ Mount Adapter lets you take full advantage of F-mount lenses when you shoot stills or video with your Nikon Z camera. There's no loss in image quality. And NIKKOR lenses without Vibration Reduction (VR) will find new levels of sharpness.

FEATURES

Deep. Wide. Close. Sharp.

Auto Exposure shooting is enabled for hundreds of F-mount lenses. And F-mount lenses with a built-in autofocus motor retain full autofocus abilities.

Steadier

If you're using an F-mount lens with VR, in-lens yaw-and-pitch detection is supplemented with the in-camera roll detection. When you're shooting with a non-VR F-mount lens, yaw, pitch, and roll are corrected in-camera.

Balanced

The adapter's large tripod socket ensures perfect balance when using F-mount lenses together with your Nikon Z camera.

The NIKKOR look

Leather-tone paintwork ensures the F-mount adapter blends perfectly with F-mount NIKKOR lenses—and Nikon Z cameras.

Go there

The magnesium-alloy barrel is tough, and light. A dust- and drip-resistant build incorporates rubber seals for lens and camera connections as well as buttons and levers.

INCLUDED ACCESSORIES

BODY CAP BF-1B
